## 📂 Projects

**Bank management system,** *Technologies used -: java, Swing , Awt ,JDBC, MYSQL, VScode* 🔗
- Developed and maintained a comprehensive bank portal catering to both new and existing users.
- Facilitated account management operations, including account creation and maintenance.
- Implemented features enabling users to block and delete their accounts seamlessly.
- Strengthened database security with a protective layer to ensure data integrity, even during interrupted processes.
.

**Quiz Application,** *Technologies used -: java , Swing, JDBC and MYSQl* 🔗
- Developed a secure desktop-based quiz application tailored for administering multiple-choice question (MCQ) exams.
- Created a user-friendly interface facilitating seamless quiz-taking and navigation.
- Implemented robust validation mechanisms to ensure the application's security and prevent unauthorized access.
- Utilized a database to store and manage quiz questions, user responses, and exam results securely.
- Designed to streamline the process of conducting MCQ exams while maintaining data integrity and user privacy.

**TicTacToe game,** *Technologies used -: Java, Java Swing, Java GUI (Graphical User Interface), and JFrame* 🔗
- The game starts with two players as active members, having a one-print board on the screen which displays 9 boxes (i.e., 3×3).
- The first person who starts the game has to enter X for any one box, followed by the other player entering the O (opposite to what the first player has entered).
- This continues unless any one of them gets a line cut either diagonally or straight.The person who founds the line is the winner of the game.
